\* With Conversion band NA - Not Applicable

1. Wall distance means the distance from finished wall till the centre of the 's' trap of the WC.

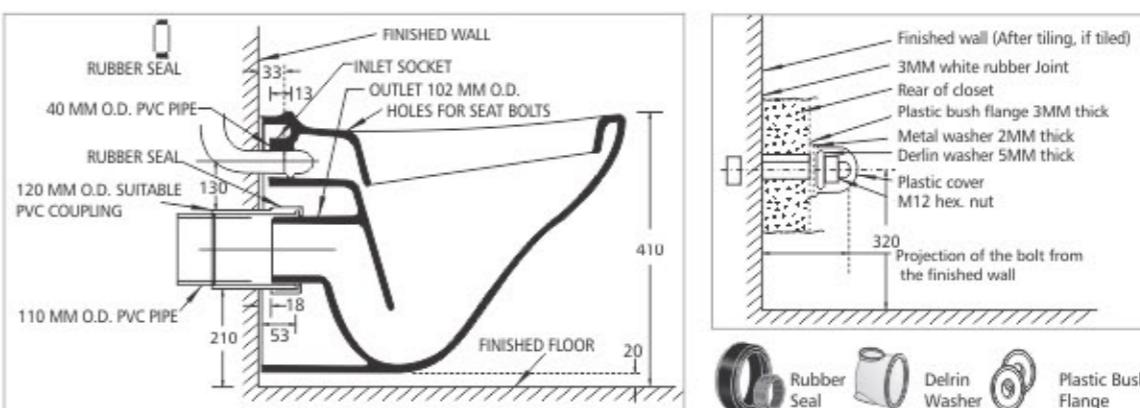

2. Floor height means the height from the finished floor till the centre of the 'p' trap of the WC.

3. All dimensions are approximate and are subject to change without notice.

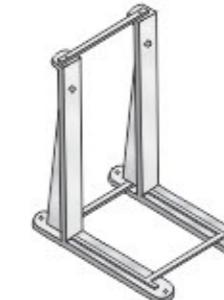

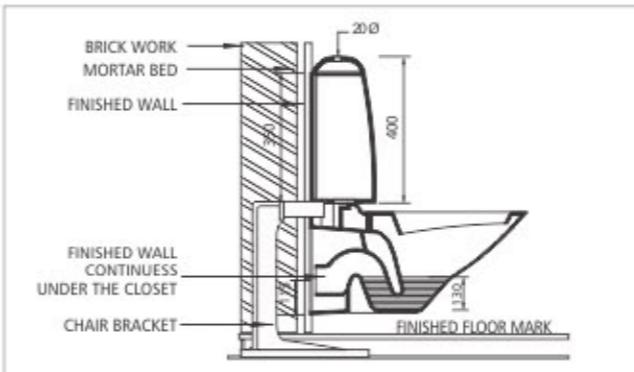

## INSTALLATION & INSTRUCTIONS

### CONCEALED WALLHUNG (Premium, Meridian, Amazone, Simi, Foursquare & Prima)

- If the wall is going to be plastered for a thickness of 12 mm and a tile thickness of 6-7 mm, the projection of the bolts from the finished wall should be 66 mm only.
- If the thickness of plastering and tile is less than the dimensions mentioned above, the bolts that are supplied along with the bracket should be moved into the wall by using a suitable spacer washer between the bolt head and the bracket frame.
- The bracket should be buried into the floor so that the height from the center line of the bolt to the surface of the finished floor is 320mm.

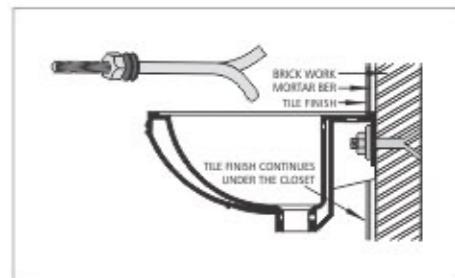

### WALL MOUNTED COUPLE CLOSET (Premium & Italia)

### WALL HUNG BASIN

- The rag bolt should be first grouted into the wall using cement / concrete, (as shown) as per distance between slots provided in the wash basin. The bolts should be fixed perpendicular to the wall. Allow cement / concrete to set. Check if the Rag bolts are firmly fixed. Fix the Wash Basin in the bolt using Nut & Washer.
- If brackets are use prefer nylon or aluminum instead of iron brackets as it tends to rust.
- If small basins are screwed to wall, use nylon washers and steel screws.
- While fixing waste outlet, ensure that the rubber washer is placed on the outlet under the basin.

## TROUBLE SHOOTING GUIDE

ITEM	PROBLEM	PROBABLE REASONS	CORRECTIVE ACTIONS
Wash Basins	1. Water deposit on tap platform and inside bowl	1. Wash Basin is not fixed in level, Bracket not leveled	1. Bracket should be corrected
	2. Overflow chocked & foul smell	2. Waste coupling used may be full threaded	2. Waste coupling should be changed to slot cut coupling
EWCs/ Indian Pan	1. Water not coming in bowl area	1. Flush bend may be inserted up to the end of inlet hole	1. Insert the flush pipe only up to the locking portion of the inlet
		2. Flush pipe end may be padded with cloth, etc	2. Flush pipe should be used with rubber adapter
		3. Closet / Pan may not be leveled	3. Closet/Pan should be leveled
Premium Floor Mounted / Wall Mounted WCs	1. Water leaking between cistern and closet	1. Diverter pipe not fixed in outlet of cistern	1. Insert the diverter pipe into the outlet of the cistern
	2. Uneven flow of water from both sides	2. Both arms of the diverter pipe not inserted equally in both sides of the closet	2. Both arms should be properly inserted inside both sides of the closet
Twin-flush WCs	1. Push rod short and not working	1. Rubber step washer may be fixed outside the cistern reducing the height of the outflow valve	1. Rubber step washer should be used in the outlet of outflow valve from inside the cistern
Coupled Closets	1. Water leaking between the cistern and the closet during flushing	1. Rubber ring gasket may not be fixed or not fixed properly	1. Rubber ring should be kept in the center between the outlet of the cistern and the inlet of the closet at correct position
	2. Water quantity insufficient for effective flushing	2. Float ball height adjusted to lower quantity of water discharge	2. Turn the adjusting screw provided on the top of the inlet in clockwise direction to increase the discharge level. (Caution: The water level may be increased till the water from the inlet shuts off at the 'top-line' mark provided on the floating body)
Cisterns	1. Water overflowing continuously from the cistern	1. Inlet valve may not be closing properly	1. Inlet valve should be opened to clean the rubber diaphragm. See that the diaphragm is not punctured
	2. Water leaking from outlet of the cistern continuously	2a. Outflow valve may not be closing properly	2a. Open the outflow valve top portion and clean the washer, if there is any dirt deposits
		2b. Valve ring may not be fixed properly to the bottom of the floating body	2b. Fix the valve ring to the top of the groove provided in the floating body. Ensure that the valve ring sits securely around the groove
		2c. Valve ring may have cracked or become worn out	2c. Replace the valve ring
	2d. Cistern not fully tightened to the closet	2d. Tighten tank holding screws evenly till they cannot be tightened further with one hand	

## TIPS FOR MAINTENANCE

- The sanitarywares from Soncera have a smooth, impermeable and practically scratch-resistant surface, which is resistant to most of the acids and alkalis commonly encountered in the home.
- For daily care, you will usually only need water and a damp cloth. Tidemarks, grease and soap residues can be removed quickly and easily with a vinegar-based or bathroom cleaner.
- Like any other part of your house, the bathroom can be made to look great and made to last if it is taken care of regularly. Here are some simple tips that can help you keep your bathroom glittering and fresh everyday.

### Wash Basins

The wash basin needs to be washed with a mild detergent at least once a day. After washing, the basin must be wiped with a dry cloth to avoid water stains, especially on dark colours. Wash basins not cleaned for along time can accumulate stains. To remove the stains, diluted hydrochloric acid may be used.

### Closets

Use a plastic bristled brush with a plastic handle to scrub the toilet with a cleanser, at least once a day. After flushing the toilet, give it a "once over" with the brush to avoid minute discoloring.

In the case of closets, if there has been no maintenance over a long period of time, water deposits and discoloration are formed on the surface of areas that get wet. In such cases, these stains/marks can be removed with the help of a solution of diluted hydrochloric acid. Do not use powder paste, thinner or dry cleaning liquids. To remove fine scratches, use Brasso or car rubbing compound and then polish with a polish cloth.

### Internal Fittings of Cisterns

Accumulation of dust / small piece stones/sand coming through pipeline in the water on inlet and outlet rubber diaphragms may result in leakage of water. In case of such malfunctioning, all you have to do is open the inlet/outlet valve and clean the diaphragms or replace them. Use only genuine spare parts.
